

TiffinLoop Dropout Tool PRD

Problem

- A home cook drops out with very short notice due to fever, family work, or no show.
- Ops hears late, often only when a hungry customer complains.
- Then ops rushes on chat to find another cook or refund.
- Customers hear nothing until food never comes. Lunch at 12:30 PM is the hard line.

Who it is for

- Ops team fixing today's food as main user.
- Customers getting the message as second user.
- Company heads seeing repeat dropouts as third user on a separate screen.

How we measure success

- Share of hurt customers told before food time with goal as all of them.
- Lunch and dinner counted apart.
- Minutes from cook is out to all told with goal under 20 minutes.
- Share covered by backup cook vs refunded with food mismatches noted.
- Repeat dropout counts by city and cook going down over 30 days.

What the test version proved

- One click shows all hurt people with meal, food type, and phone.
- Backup search keeps same city.
- Food rule is respected where Jain food needs Jain kitchen.
- Daily limit is respected minus already promised plates.
- Lunch gets assigned first.
- A Jain dinner goes to a Jain kitchen with a food type warning.
- A customer with no phone shows as needs visit not sent.
- Every action is written in a log.
- Same food backup is too small for both Bangalore dropouts together so other food or refund path is a must.

What we left out and why

- One cook at a time because it is quicker to build and test.
- Shared limit still blocks double booking.
- Test messages only because there is no real message vendor in 4 hours.
- Log saved in this browser because it shows the shape while shared log comes later.
- Plain 30 day counts because there are no trend lines yet.
- No cook joining screen because the sheet stays the source.

Open questions before real build

- Jain rule as hard block or allow with warning.
- Who says yes to other food swap, ops or customer reply.
- Sender name and daily message limit and one phone two names rule.
- Shared log design and how long to keep.
- Daily sheet to app refresh job.
- Handoff to delivery partners for late pickups.
